

Cablelok™ Cable Seals

The CABLELOK™ seal is a unique and patented product used for the environmental sealing of cable entering a HellermannTyton joining closure. Manufactured from an external grade of flexible neoprene, sealing is achieved by a number of internal lip seals, which are compressed onto the cable during installation.

The base port is opened using the correct size port opening tool (1)*. The cable is then simply inserted into the opened port (2) and then threaded through the Cablelok™ seal (3) so that sufficient cable is available for jointing. The Cablelok™ seal and cable are then pulled back together through the port (4) until the location shoulder of the seal locks against the open end of the port.

*Please contact our Sales Office for details of the available tools

- Excellent sealing properties to 6m head of water
- Rapid and consistent installation without specialist tools as compared with heatshrink
- Ideal for use in hazardous areas as no heat is required for installation
- Dual outlet versions for loop through applications
- Multi-hole versions are available allowing several cable drops from the same port
- Supplied with lubricant impregnated wipes to assist installation
- Cablelok™ hole plugs are available for sealing unused outlets in multi-hole versions

The photographs below illustrate the assembly steps:

(1) Punch out base hole with port tool

(2) Feed through cable

(3) Slide on Cablelok™ seal

(4) Pull back to correct position

Installation Time

Part Number	Cable Range mm	Size	Pack Size
CABLELOK3598	2 x 1.7 - 2.0	R7	50
CABLELOK1078	2 x 3.8 - 4.8	R5	
CABLELOK1080	3.8 - 5.2	R1	
CABLELOK1081	5.2 - 8.0	R2
